

■ 8. Roadmap (2026)

In 2026, 100Leverage advances toward a fully automated, institution-grade AI trading ecosystem powered by the Razor Engine. The roadmap focuses on improving the intelligence, execution quality, and scalability of the platform while opening the doors for B2B and professional partners.

■ Q1 2026 — Razor Engine v2

The year begins with a major upgrade to the core of the platform: Razor Engine v2.

This release focuses on deeper refinement of the AI execution and signal-processing pipeline, enabling more precise and reliable market insights across multiple asset classes.

Key developments include:

Refined execution layers, improving speed, stability, and order handling efficiency.

Smarter noise filtering, minimizing false signals and improving signal-to-noise ratio across volatile markets.

Enhanced signal validation, ensuring that all AI-generated signals pass through multiple verification layers before execution.

Extended market coverage, enabling Razor Engine to operate across a wider range of instruments and liquidity conditions.

This version lays the technical foundation for fully automated strategies and institutional-grade execution later in the year.

■ Q2 2026 — AI Auto-Strategies

In Q2, 100Leverage introduces fully automated, AI-driven trading strategies designed for traders with different risk profiles and objectives.

This update transforms Razor Engine from a signal-based solution into a hands-off intelligent trading system.

Key features:

Automated AI strategies, powered directly by Razor Engine v2.

Customizable risk profiles (conservative, balanced, aggressive).

Smart position sizing, adapting to market conditions in real time.

Auto-risk management with dynamic stop-loss, take-profit, and volatility-based adjustments.

Pre-built strategy presets, enabling fast onboarding for new users.

This expansion unlocks a new stage of usability: users can rely on the platform to execute fully automated strategies curated by AI.

■ Q3 2026 — Institutional Execution Suite

Q3 is dedicated to building the institutional layer of 100Leverage, enabling hedge funds, trading firms, and high-frequency partners to leverage the platform through dedicated tools and APIs.

This suite includes:

Advanced execution toolkit, built for professional-grade order handling.

Real-time routing optimizers, selecting the best venue, liquidity source, or route for each order.

Smart latency filters, ensuring execution consistency in volatile conditions.

Institutional-grade OMS (order management system) with advanced controls.

Expanded low-latency data infrastructure, enabling high-performance trading flows for B2B clients.

Enterprise API upgrade, designed for integration with funds, quant teams, and trading infrastructures.

This milestone solidifies 100Leverage as not just a trader-focused product, but a scalable AI infrastructure layer for institutional partners.

■ Q4 2026 — Algorithmic Market

In the final quarter of 2026, 100Leverage launches the Algorithmic Market — a modular ecosystem of AI-powered algorithmic trading tools, models, and strategy components.

This ecosystem empowers both users and external developers to expand the platform.

Key components:

AI model marketplace, where users can access advanced algorithmic strategies.

Strategy module system, allowing plug-and-play integration of trading logic.

Creator Hub, enabling developers and quantitative engineers to publish and monetize algorithms.

Revenue-sharing model, rewarding creators based on usage and performance of their modules.

AI-curated ranking system, ensuring quality, legitimacy, and performance integrity across the marketplace.

Deep integration with Razor Engine v2, guaranteeing validated execution for all modules.

This marks the evolution of 100Leverage from a platform into a full AI-driven trading ecosystem, where traders, institutions, and developers collaborate through a unified AI foundation.
