

■ 100L Tokenomics — Full English Version (Final)

1. Token Overview

Token Name: 100Leverage Token Symbol: 100L Type: Utility + Governance Total Supply: 100,000,000 (fixed, non-inflationary) Protocol Purpose: 100L powers premium access, AI automation, marketplace activity, fee optimization, staking rewards, and governance within the 100Leverage ecosystem.

The token is designed to be utilized, not speculated, with sustainable demand driven by platform utility and AI-powered tools.

2. Core Utilities of 100L

The 100L token has multiple real, functional utilities directly tied to the platform.

2.1 Premium Access to AI Features

Staking 100L unlocks all premium and advanced AI modules:

Razor Engine Advanced Insights

AI Predictive Analytics (multi-timeframe)

Market Anomaly Detector

Liquidity & Volatility Forecasting

Strategy Quality Metrics

Execution Optimizer

Priority Signal Routing

Access to AI Auto-Strategies

Staking is cheaper than paying subscription fees. This ensures strong ongoing demand for 100L.

2.2 Fee Reductions

Users who stake 100L receive:

reduced execution fees

reduced marketplace commissions

enhanced model access limits

priority access to high-load AI models

2.3 Marketplace Currency

100L is the native currency of the Algorithmic Market, powering:

purchases of AI strategies

purchases of algorithmic modules

unlocking advanced filtering tools

buying enhanced backtesting & analytics packages

This creates continuous transactional demand.

2.4 Governance (DAO)

Staked 100L provides governance rights over:

Strategy listing approvals

Marketplace fee structure

Token burn decisions

Allocation of ecosystem funds

Roadmap prioritization

Risk-policy parameters

Creator verification rules

DAO ensures transparent, community-driven growth.

2.5 Stake-to-Earn

A sustainable incentive model (not high APY farming):

Stakers earn:

a percentage of marketplace fees

a percentage of premium AI purchases

bonus unlocks for holding long-term

increased AI usage limits

Rewards originate from real economic activity, not inflation.

3. Deflation Mechanisms

To support long-term token value, 100L uses controlled, healthy deflation built into platform activity.

3.1 Marketplace Burn

Every purchase of strategies or AI modules triggers:

2% of the payment → permanently burned

3.2 Premium AI Burn

When users purchase advanced AI packages:

1–3% → burned

3.3 Early Unstaking Penalty

If users unstake before the required period:

1% penalty → burned

3.4 DAO-Driven Burns

DAO can vote to burn surplus tokens from the treasury during exceptional events or overperformance of marketplace revenue.

4. Token Distribution

Total Supply: 100,000,000 100L

No inflation. No additional minting.

5. Economic Sustainability Principles

100Leverage's token model follows strict design rules:

✓ Utility-first, not hype-first

Value comes from platform usage, AI features, and transaction volume.

✓ Fixed supply = stronger long-term valuation

No inflation ensures demand > supply over time.

✓ Deflation via real platform activity

Burning tied directly to usage → more adoption = more deflation.

✓ Reward mechanisms tied to revenue, not emissions

No unsustainable yield farming.

✓ DAO governance ensures decentralization & transparency

✓ Marketplace growth drives token demand

More models, more creators → higher token velocity.

6. Token Value Drivers

100L derives long-term value from:

Continuous demand for premium AI modules

Automated strategies using 100L for activation

Marketplace transactions (strategies, models, upgrades)

Staking incentives tied to revenue, not inflation

Governance over critical ecosystem components

Execution fee discounts that encourage holding

Deflationary burn mechanics

Wide usability across all platform components

7. Summary

100L is designed to be:

Useful (premium access, automation, discounts, governance)

Sustainable (revenue-backed rewards, no inflation)

Deflationary (built-in burn mechanisms)

Integrated across all layers of 100L Leverage

Scalable for future AI modules and marketplace expansion

It is the economic engine behind the Razor Engine ecosystem and the key to unlocking the full power of 100L Leverage.
